

SRG Remote Console Cable

The remote console cable is used to connect the Console, AIU or HBC to either of the 'HD 15 way D-Type' interface connectors at the rear of the transceiver. The cable carries:

- Console comms
- PEI comms
- Console power
- Audio in and out

Different length cables provide a flexible installation solution so that the console can either be installed locally or remotely from the transceiver.

Please note: The cable is not included with the transceiver or console (unless otherwise stated). This item should be ordered separately.

Description	Part number
Remote console cable, 0.5m	300-00067
Remote console cable, 2m	300-00068
