

# Declaration regarding environmental requirements for stationary samplers WS 312-12 and WS 312-24

28 May 2024

This document is to confirm that the offered samplers WS 312-12 and WS 312-24 fulfills the environmental requirements of the tender.

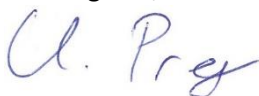

The following measures are implemented to ensure that the samplers are “strong, functional, their individual components can be easily repaired and/or replaced”:

- Housing design that allows easy access to components for repair.
- No gluing or casting of components that prevents replacement.
- Separation from electronic components to prevent damage through liquids in case of malfunctions.
- Use of high-grade components and materials.
- Use of common components wherever possible to assure a long and high spare parts availability.
- Long-term availability of spare parts; even for samplers that are over 20 years old.
- Etc.

The following measures are implemented to ensure that “the sampler itself or its parts that are no longer suitable for use must be recycled”:

- No unnecessary gluing or casting of assemblies to allow for easy dismantling/separation according to materials.
- The insulation is not foamed which allows easy separation from the stainless steel.
- Possibility to return the device/components for proper disposal with participation in recycling programs.
- Etc.

Best regards,

Ulrich Preg
